

Reducing Carbon Emissions

Founded in 1927, Hermann Services has consistently grown its transportation services. Today, we own and operate a large, “smart” fleet of ELD-equipped, energy-efficient equipment.

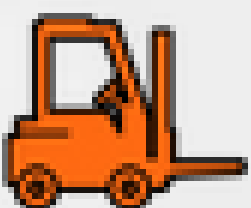

Sustainability steps we've taken:

Implementing energy-efficient lighting systems

Optimizing routing algorithms for fuel efficiency

Investing in electric forklifts

And more!

To reduce the environmental impact of diesel emissions, Hermann Services has begun transitioning to electric vehicles, implementing energy-efficient practices, and working with key stakeholders to lower our carbon footprint. Our sustainability efforts go beyond daily operations, we partner with like-minded suppliers to ensure our entire supply chain supports a greener future.

Innovations like zero-emission trucks, smart energy systems, strong leadership, and collaboration have made sustainability a core part of our business strategy and ensured the initiative's scalability and impact.
